The traditional higher education system must adapt to the today's reality of:

- The Ever-Evolving Landscape of Work and Rapid Change
- Non-Linear Careers ...Multiple Transitions and Career Lattice...
- Uncertainty ...Unprecedented Contexts

for the Future of Work

“Today, university need to prepare students for more rapid economic and social change than ever before, for jobs that have not yet been created, to use technologies that have not yet been invented, and to solve social problems that we do not yet know will arise.”

CHANGE ...

Characteristics of the Ever-Evolving Landscape of Work...

- **Knowledge Abundance, Meaning Scarcity:** Knowing facts no longer defines value; being able to **interpret, apply, lead, adapt, and create value** does.
- **Skills Half-Life Think:** Talent value erodes rapidly as technologies change every 3–5 years.
- **Work Identities Fragment:** Individuals cycle through multiple professional identities, simultaneously or sequentially.

DIGITAL
Era
features of change

- **Value-Based Economy Emerges:** Nations compete on innovation, design, creativity, digital fluency, sustainability, culture, trust, citizen well-being.
- **Human-AI Symbiosis:** AI performs analysis, retrieval, and automation; humans drive contextual judgment, empathy, ethics, systems thinking, and creative leadership.

New logic of human activity:

- Creating Unprecedented Values
- Data-Driven
- Hyperconnectivity: people, knowledge, work, and value creation through data, networks, and intelligent machines
- Automated or Intelligence
- Personalised
- Iterative and Continuously Improvement
- Transparent, Open, and Collaborative

“
an education that nurtures
workforces capable of creating
value through knowledge,
technology, ethics, and
collective action in an evolving
world.

“high-agency humans” capable
of evolving with change

Core Characteristics:

- **Adaptive Expertise:** can transfer knowledge across domains
- **Meta-Learning Capacity:** knows how to learn what they need, when they need it
- **Character-Driven Performance:** approaches work with integrity, curiosity, and resilience
- **Ethical & Civic Agency:** act with responsibility toward society and planet
- **Creative & Cultural Intelligence:** create value from culture, identity, and imagination
- **Transdisciplinary Thinking:** integrate knowledge across domains to create value
- **Technological Humanism:** human-centered AI data and digital fluency
- **Systems Sense-Making:** Understand and act in complexity
- Ect.

It is not about “learning everything,”
but “becoming” someone capable of
creating value in anything.

HABITS of MIND

a way of behaving intelligently when faced with a problem
where the answer is not immediately known

 <p>1. Persisting <i>Stick to it!</i> Persevering in task through to completion; remaining focused. Looking for ways to reach your goal when stuck. Not giving up.</p>	 <p>2. Managing Impulsivity <i>Take your time!</i> Thinking before acting; remaining calm, thoughtful and deliberative.</p>	 <p>3. Listening with understanding and empathy <i>Understand others!</i> Devoting mental energy to another person's thoughts and ideas; Make an effort to perceive another's point of view and emotions.</p>	 <p>4. Thinking flexibly <i>Look at it another way!</i> Being able to change perspectives, generate alternatives, consider options.</p>
 <p>5. Thinking about your thinking (Metacognition) <i>Know your knowing!</i> Being aware of your own thoughts, strategies, feelings and actions and their effects on others.</p>	 <p>6. Striving for accuracy <i>Check it again!</i> Always doing your best. Setting high standards. Checking and finding ways to improve constantly.</p>	 <p>7. Questioning and problem posing <i>How do you know?</i> Having a questioning attitude; knowing what data are needed & developing questioning strategies to produce those data. Finding problems to solve.</p>	 <p>8. Applying past knowledge to new situations <i>Use what you learn!</i> Accessing prior knowledge; transferring knowledge beyond the situation in which it was learned.</p>
 <p>9. Thinking & communicating with clarity and precision <i>Be clear!</i> Strive for accurate communication in both written and oral form; avoiding over-generalizations, distortions, deletions and exaggerations.</p>	 <p>10. Gather data through all senses <i>Use your natural pathways!</i> Pay attention to the world around you. Gather data through all the senses. taste, touch, smell, hearing and sight.</p>	 <p>11. Creating, imagining, and innovating <i>Try a different way!</i> Generating new and novel ideas, fluency, originality</p>	 <p>12. Responding with wonderment and awe <i>Have fun figuring it out!</i> Finding the world awesome, mysterious and being intrigued with phenomena and beauty.</p>
 <p>13. Taking responsible risks <i>Venture out!</i> Being adventuresome; living on the edge of one's competence. Try new things constantly.</p>	 <p>14. Finding humor <i>Laugh a little!</i> Finding the whimsical, incongruous and unexpected. Being able to laugh at one's self.</p>	 <p>15. Thinking interdependently <i>Work together!</i> Being able to work in and learn from others in reciprocal situations. Team work.</p>	 <p>16. Remaining open to continuous learning <i>Learn from experiences!</i> Having humility and pride when admitting we don't know; resisting complacency.</p>

EDUCATION

educate (v.)

mid-15c., *educaten*, "bring up (children), to train," from Latin *educatus*, past participle of *educare* "bring up, rear, educate" (source also of Italian *educare*, Spanish *educar*, French *éduquer*), which is a frequentative of or otherwise related to *educere* "bring out, lead forth," from *ex-* "out" (see **ex-**) + *ducere* "to lead" (from PIE root ***deuk-** "to lead"). The meaning "provide schooling" is attested by 1580s. Related: **Educated**; *educating*.

- Education is harmonious development of the physical, mental, spiritual and social, the forth dimension of life...
- Education means to "bring out" of the learner that spirit of learning and wonder, the desire to know that thirsts for knowledge...
- Education means to teach the mind to think...
- Education means to "lead out" internal hidden talent of a child or person...
- Education means to learn, to know , and to "lead out"...
- Education means a transcendental change of mind and/or attitude...

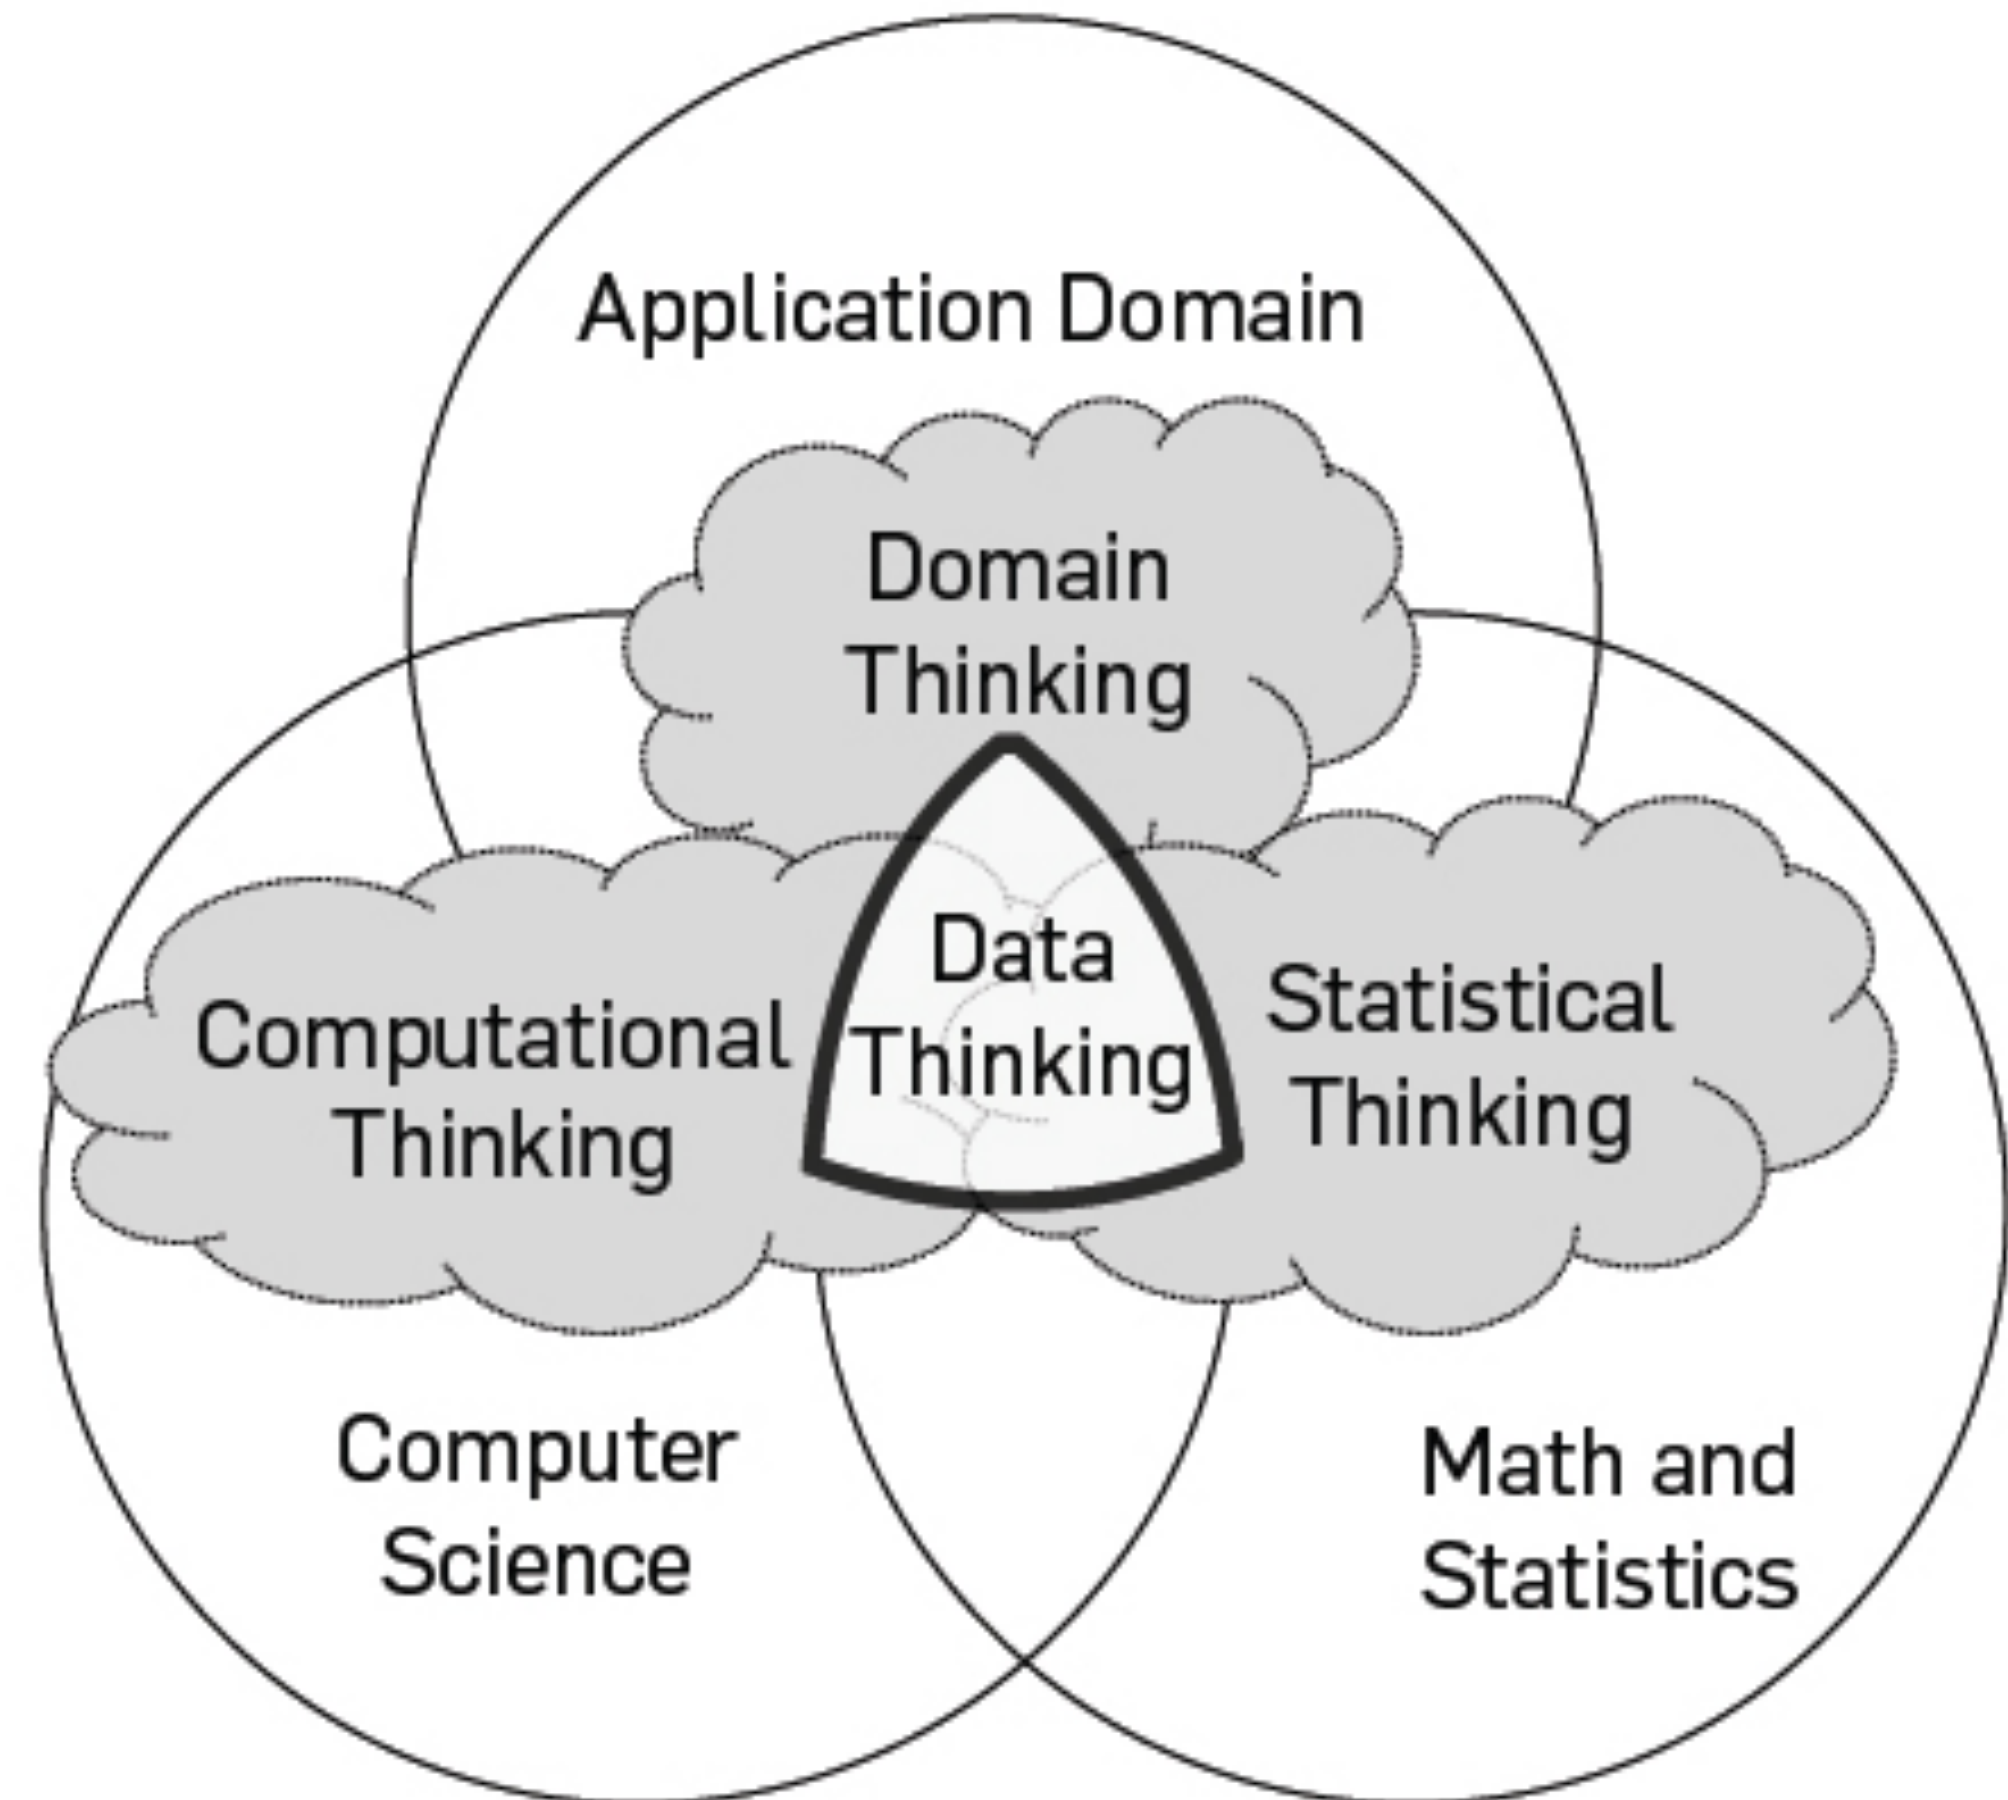

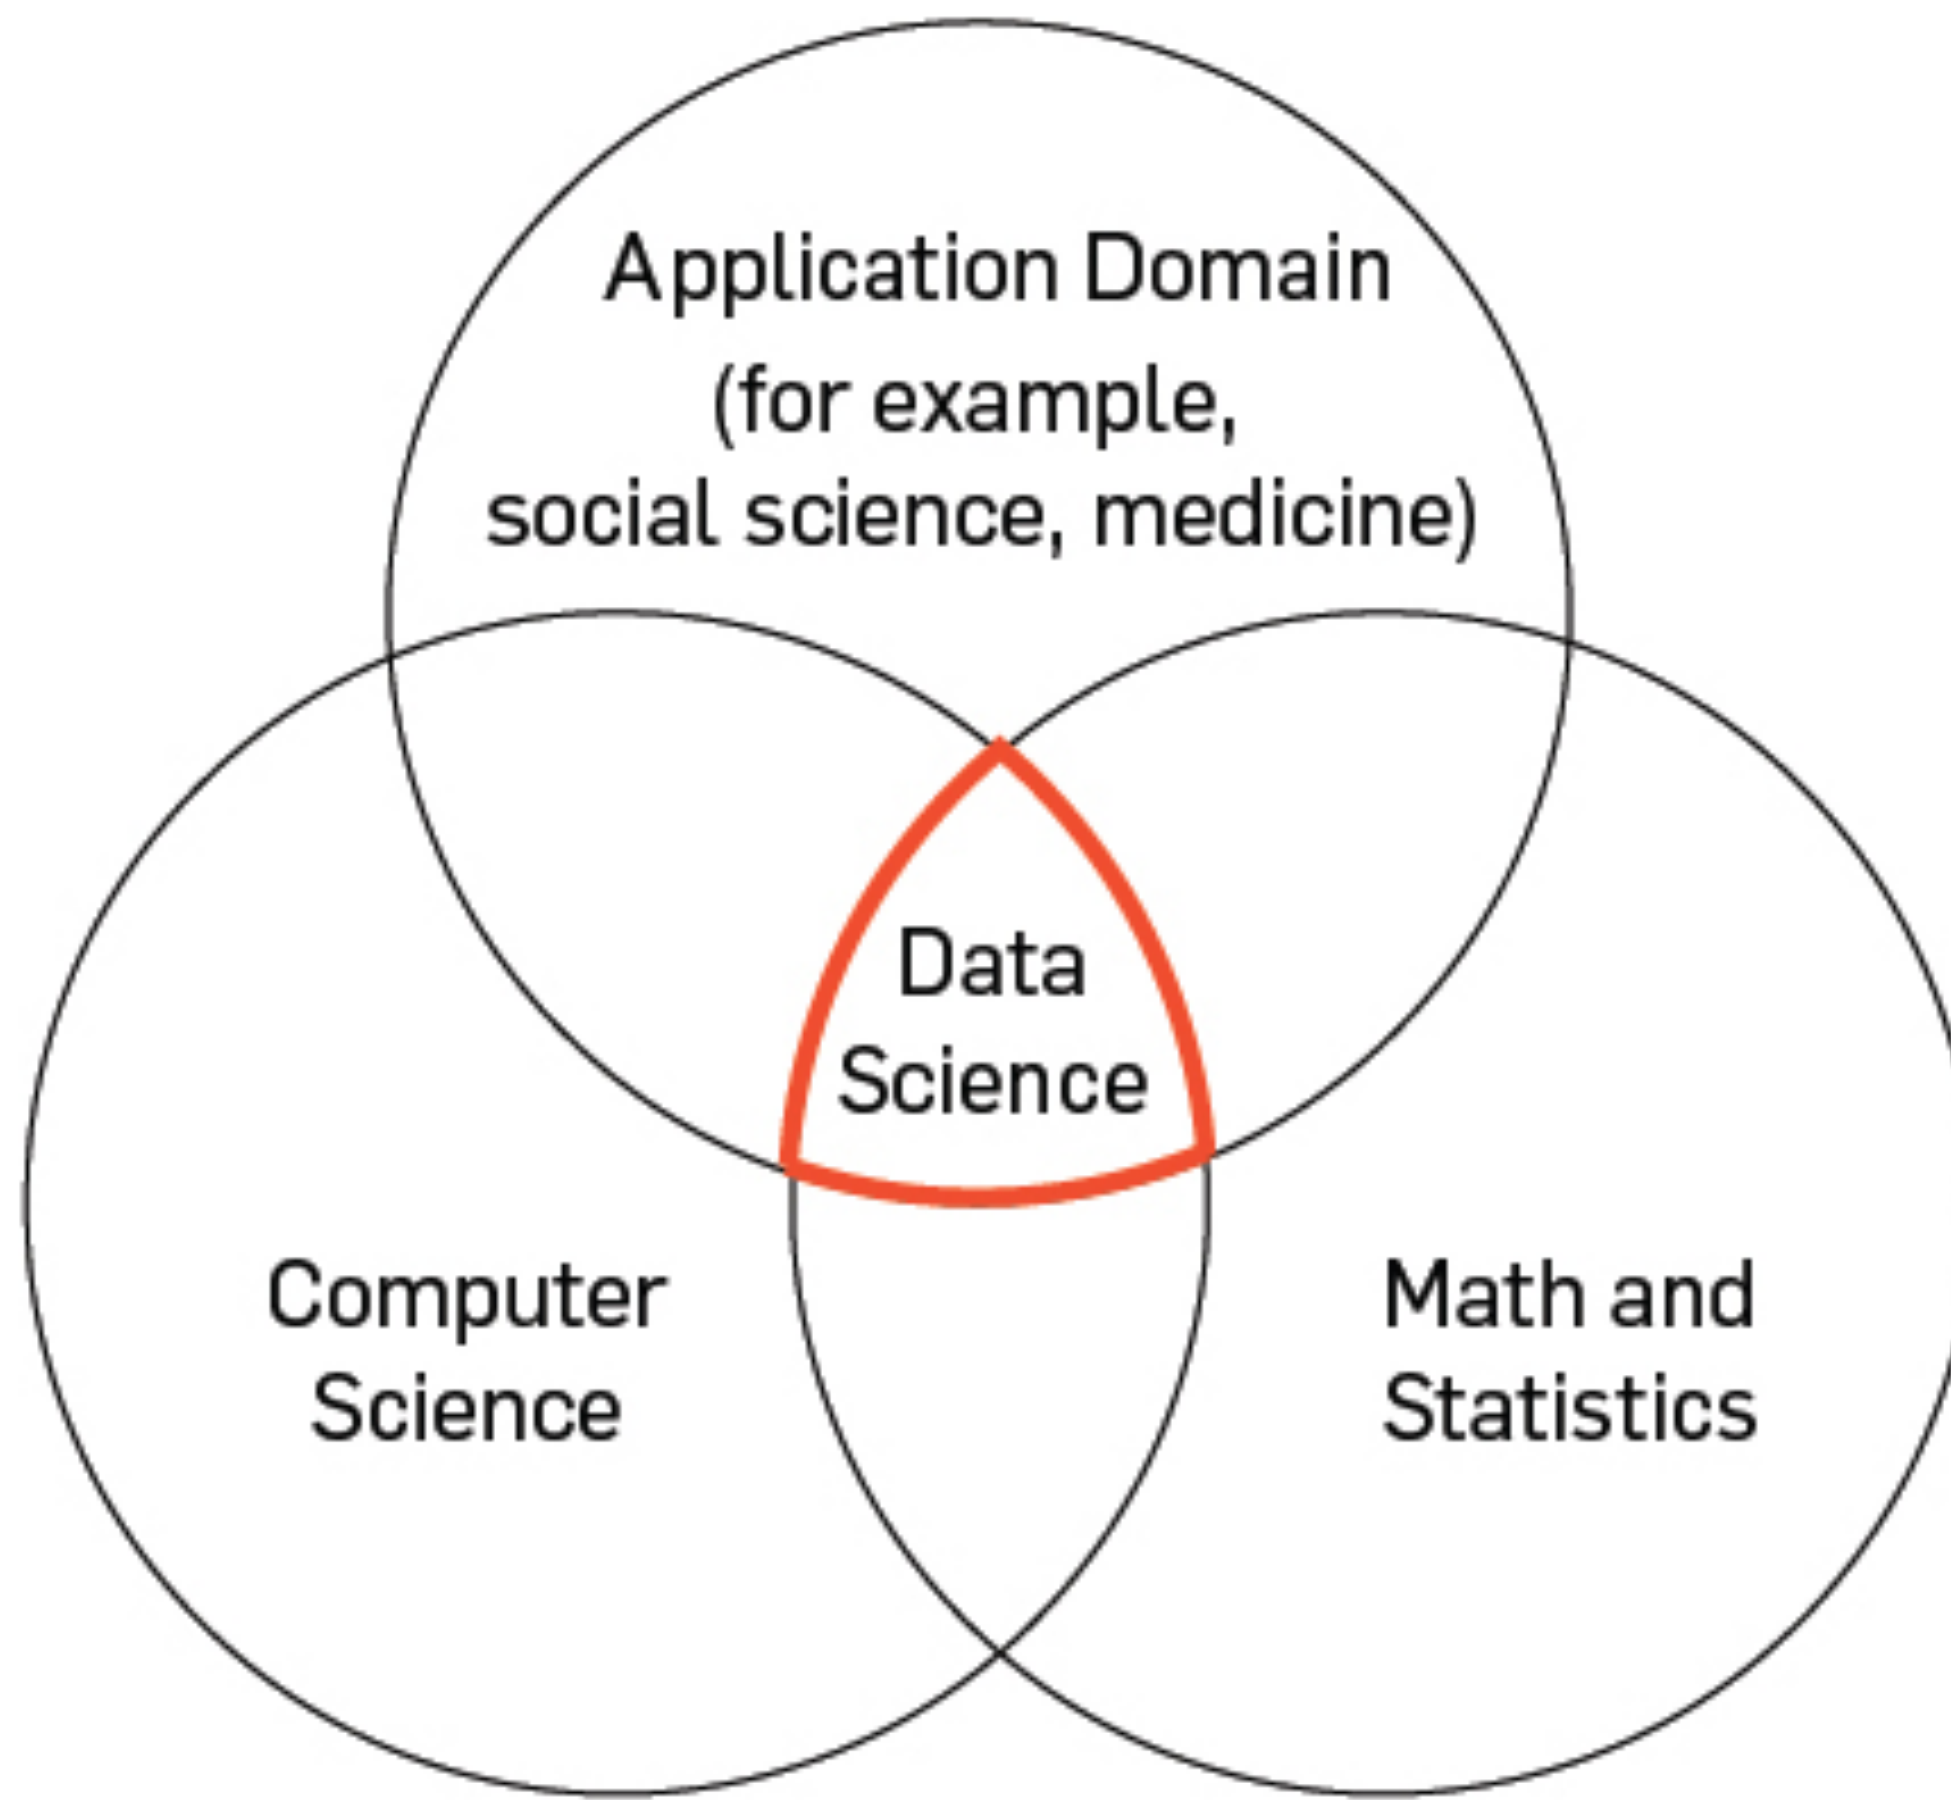

Education, as per UNESCO, is a tool for global change, aiming to cultivate socially responsible individuals with lifelong learning, critical thinking, and aesthetic appreciation, contributing to a harmonious society.

EDUCATION

Learning as a “Process...”

Education is a lifelong journey that never ends. It is not just about preparing for a future career or acquiring a certain set of skills, but rather it is about shaping our character, broadening our horizons, and providing us with the tools to live a fulfilling life.

Education is life itself.

It is time for

RADICAL
CHANGE

Generative Artificial Intelligence

ARE THEY SMART YET ?

The role of Large Language Models (LLMs)

A Large Language Model (LLM) is an artificial intelligence system trained on massive amounts of “text data” to understand, generate, and manipulate human language.

It is an neural network that encode linguistic knowledge, world knowledge, reasoning patterns, and “task behaviours.”

**CONTEXT
INDEPENDENT**

**formation
of a
WHOLE**

**joining
of
WHOLES**

Wisdom is recognition that knowledge pattern arise from fundamental principles and the understanding of what those principles are.

Wisdom

**KNOW
WHY**

**UNDERSTANDING
PRINCIPLES**

Knowledge

**KNOW

**UNDERSTANDING
PATTERNS**

Information

**KNOW
WHAT**

**UNDERSTANDING
RELATIONS**

DATA

Information is represented by relationships between data and possibly other information.

**connection
of**

**gathering
of
DATA**

Data is an item or event out of the context with no relation to other things.

Data

**KNOW
NOTHING**

UNDERSTANDING

What is LLM For?

- **Understanding:** interpreting natural language queries, summarising text, extracting meaning, sentiment, or intent, passing ambiguous or incomplete language
- **Generating:** writing new text in any style, drafting business reports, emails, or articles, producing stories, explanations, or dialogues, creating structured content (tables, outlines, framework)
- **Transforming:** translating languages, rewriting in new styles or tones, converting unstructured text into structured formats, simplifying or expanding content
- **Reasoning:** logical inference, planning and decision-making, math and symbolic operations, step-by-step problem solving

What Generative AI Cannot Do:

- Truly Understanding
- Know the Real World
- Guarantee Truth
- Reason Perfectly
- Avoid Bias
- Create Genuine Human Meaning
- Act Physically
- Behave Ethically by Itself
- Replace Human Responsibility

AI's Role in the Next General Education

Cultivating Intellectual Character - AI can help students develop habits of mind: rigorous inquiry, intellectual humility, ethical reasoning, and synthesizing across disciplines. Not just "what to think" but "how to think with character."

Cross-Disciplinary Synthesis - AI can model and facilitate connections between humanities, sciences, and arts that traditional silos prevent. Students learn to see problems from multiple frameworks simultaneously.

Authentic Work Quality - AI can provide sophisticated feedback on the **quality of thinking and craftsmanship** in student work - not just correctness, but depth, originality, ethical consideration, and elegance of reasoning.

Resilience Through Challenge - AI tutors can create "productive struggle" environments where students develop grit and adaptability through carefully calibrated challenges that build confidence in their ability to tackle the unfamiliar.

Ethical Formation - AI scenarios and simulations can help students wrestle with complex ethical dilemmas across professional and civic contexts, developing moral reasoning alongside technical competence.

AI's Role in the Next General Education

AI should help cultivate **habits of mind**, such as:

Disposition

Why it matters in AI age

Intellectual humility

AI makes confident mistakes; humans must question "the answer"

Ethical reasoning

Intelligence is easily misused at scale

System thinking

Problems today are interconnected and dynamic

Imagination & creativity

AI imitates past patterns; humans must extend them

Judgement under ambiguity

Generative models produce plausible uncertainty

Instead of teaching “How to use AI,” teachers should “design learning process” that builds:

- critical co-creation with AI (not automation)
- ethical inquiry into power and data
- human-AI dialogue as thinking process
- collective reasoning, not individual answers
- reflection on bias, values, and consequences

AI becomes a **partner in thinking**, not a tutor or tool.

AI's Role in the Next General Education

2. Redefine the roles: AI vs Teacher vs Student

AI's proper role

AI should be used as:

1. **Amplifier of options** – generating ideas, perspectives, scenarios, counterarguments.
2. **Simulator** – creating complex, changing contexts to practice decisions.
3. **Mirror** – helping students see patterns in their own thinking, writing, bias.

Teacher's proper role

Teachers become:

1. **Sense-maker and ethicist** – helping students judge *what matters* and *what is right*.
2. **Designer of productive constraints** – deciding when *not* to use AI, or how to use it in a disciplined way.
3. **Model of human disposition** – demonstrating humility, curiosity, courage, and responsibility when using AI.

Student's proper role

Students are no longer passive receivers of content or clever "AI users". They are:

- **Strategists** – deciding *when, why, and how* to bring AI into a task.
- **Critics** – interrogating AI outputs, not consuming them.
- **Co-creators** – integrating AI, human insight, and real-world context into action.

AI becomes a **partner in thinking**, not a tutor or tool.

3. Design Principles: How AI + Teacher Should Work Together

Here are three simple design rules you can use for curriculum, courses, or policy:

1. AI is the beginning of the task, not the end.

- Student *must* go beyond AI's first answer: refine, critique, compare, contradict, contextualize, localize.

2. The human must stay in the role of explainer and decision-maker.

- Students must be able to answer:

“Why did you choose this, against these alternatives, for this context?”

3. Assessment focuses on process, judgement, and reflection — not just product.

- Require students to show:
 - how they used AI,
 - what they accepted/rejected and why,
 - what they would do differently next time.

AI becomes a **partner in thinking**, not a tutor or tool.

If you're not prepared to be **wrong**,
you'll **never** come up with **anything** original.

- Sir Ken Robinson
